Dear Hiring Manager,

I hope you are doing well. My name is Kaushal Kumar Gupta, and I would like to express my sincere gratitude for selecting me for the Web Development Intern position at your esteemed organization. Thank you very much for offering me this opportunity.

I am pleased to formally accept the offer for the Web Development Intern role. As a B Tech CSE (core) student, I have built a strong foundation in Python, NumPy, Pandas, problem-solving, and basic machine learning concepts. I am excited to contribute these skills to your team and learn further under industry guidance.

I have attached my resume for your records with the standardized file name:
kashi resume.pdf

Kindly let me know if any additional documents, verification details, or onboarding requirements are needed prior to my joining. I will be happy to provide them at the earliest.

Thank you once again for this valuable opportunity. I genuinely look forward to working with your team and contributing positively.

Regards,
Kaushal Kumar Gupta

1. What type of cybercrime is happening here?

The cybercrime happening here is **phishing**, specifically **job-offer phishing** or **employment scam**.

The scammer is pretending to be from Google and is trying to trick the student into paying a fake “verification fee,” which makes it a clear case of **phishing to steal money and personal information**.

2. List 3 red flags that show it is a scam?

1. Asking for Money (Verification Fee)

Legitimate companies like Google **never** ask candidates to pay any fee for interviews, verification, or hiring.

2. Unrealistic/Too-Good-to-Be-True Offer

A high salary (₹18 LPA) for a student with no interview or process is **unrealistic**, which is a common trick used by scammers.

3. Sense of Urgency ("Limited seats. Pay now")

Scammers create urgency to pressure victims into paying quickly **without thinking or verifying**.

3. What should he do to verify if a job offer is real?

- **Check the official website and careers page**

Visit the company’s official site (e.g., Google Careers) to see if the job position actually exists.

- **Verify the sender’s email or profile**

Legitimate companies use official domains (like `@google.com`). Suspicious or generic emails indicate a scam.

- **Contact the company directly**

Reach out to the company’s HR or support through official contact details, not the ones provided in the message.

- **Search online for similar scam reports**

Look up the message or offer wording—many fake job scams are reported online.

- **Check if they ask for money**

No real company asks for fees for interviews, verification, or registration. If they ask for payment, it’s fake.

"Is online learning better than offline learning for college students?"
send me answer in 120 to 150 word

Here is a 120–150 word answer:

Online learning and offline learning both have advantages, but choosing which is better for college students depends on their needs and learning styles. **Online learning** offers flexibility, allowing students to attend classes from anywhere and balance studies with part-time jobs or personal responsibilities. It also provides access to recorded lectures, digital resources, and self-paced learning. However, students may face distractions at home and limited face-to-face interaction with teachers and classmates.

On the other hand, **offline learning** creates a structured environment with regular schedules, direct communication, and better opportunities for group activities, practical work, and campus experiences. It also helps students build discipline and social skills.

Overall, neither method is universally better. A **blended approach**, combining online convenience with offline engagement, is often the most effective for college students.

Before Plagiarism

The screenshot shows the JustDone plagiarism checker interface. At the top, there's a navigation bar with links for 'Plagiarism Checker', 'AI Humanizer', 'AI Detector', 'AI Tools', 'Pricing', 'Log In', and a 'Try JustDone' button. Below the navigation is a red banner with a checkmark icon and the text 'High plagiarism level'. A main text area discusses the pros and cons of online vs. offline learning. To the left, a section displays a progress bar for a 40% average plagiarism level, broken down into 'Minor changes' (40%) and 'Identical' (8%). It also mentions being 'Double checked by' three services: Originality.ai, Scribbr, and GPTZero. To the right, a call-to-action box offers to 'Remove plagiarism from your text "Online and offline learning"' with a 'Remove Plagiarism' button and two bullet points: 'Get 100% plagiarism-free text' and 'Keep your original meaning'.

After Plagiarism

This screenshot shows the JustDone plagiarism checker interface after some text has been edited. The layout is identical to the previous one, with the same navigation bar and red 'High plagiarism level' banner. The main text area now discusses the benefits of online classes. The plagiarism statistics have changed: the average level is now 63%, with 'Minor changes' at 30% and 'Identical' at 16%. The 'Double checked by' section remains the same. The call-to-action box still offers to remove plagiarism from the text 'Online classes'.

Written By Student:

Artificial intelligence will not completely replace jobs, but it will change the way many jobs are done. In the future, AI can handle repetitive and time-consuming tasks such as data entry, calculations, and basic customer service. This may cause some jobs to disappear, especially those that do not require creativity or human judgment. However, AI will also create new job opportunities in areas like technology, healthcare, and education. People will need to learn new skills to work alongside AI, such as problem-solving and critical thinking. Instead of replacing humans, AI can help workers become more efficient and productive. Overall, AI is more likely to change jobs rather than replace them completely, and humans will still play an important role in the workplace.

Ask By ChatGPT:

Artificial intelligence is changing the world of work, but it is unlikely to replace all human jobs. Many tasks that are repetitive or simple can be done faster by AI, which may reduce the need for certain types of jobs. However, this does not mean humans will become useless. Instead, jobs will evolve, and new roles will be created that require human creativity, emotions, and decision-making skills. Fields like medicine, education, and technology will continue to need people to guide and manage AI systems. Workers will have to learn new skills and adapt to new ways of working. AI can support humans by making work easier and more efficient. Therefore, AI will mainly change jobs rather than completely replace them.

Comparison Table:

Human-Generated Content	AI-Generated Content
Created using human thinking, emotions, and experiences	Created using algorithms and data
Shows personal opinions and creativity	Based on patterns and existing information
May include emotions and personal tone	Usually neutral and factual
Can make mistakes due to human bias	Can make mistakes due to incorrect data
Takes more time and effort	Can be created quickly and efficiently

NotebookLM

The screenshot shows the NotebookLM interface. On the left, the 'Sources' panel lists nine Microsoft Word documents under 'LECTURE 8.docx' and 'Unit3_Lect1_content.docx' through 'Unit3_Lect6_content.docx'. In the center, the 'Chat' panel displays a summary of the study guide synthesis, mentioning key concepts like Internet basics and professional communication. Below this is a section titled 'I. Internet Basics and Professional Communication' with sub-sections 'A. Core Internet Concepts' and 'B. Professional Communication'. The 'B' section includes a question about tactics to avoid online scams, a question about differentiating Google Drive and OneDrive, and a question about LinkedIn. On the right, the 'Studio' panel offers various creation tools: 'Audio Overview', 'Video Overview', 'Mind Map', 'Reports', 'Flashcards' (marked as BETA), 'Quiz' (marked as BETA), 'Infographic' (marked as BETA), and 'Slide Deck'. A note at the bottom states: 'NotebookLM can be inaccurate; please double check its responses.'
